

## **What are computers?**

**\o/**

Computers are machines that are such a great tool for us nowadays, we have different types of computers, mobile phones, notebooks, tablets, desktop. A desktop has many more options than phones, but in the future I think that is change, technology evolving very fast, and desktop computers, keyboards and mouse will start to disappear. Anyway I love then for play games, Video Games nowadays become e-sport that moves a lot of money and has a lot of people following the teams. If you think, ten years before today, computers were simply a tool to send emails and write documents. Today we have many tools and ways to entertainment, like Youtube, Netflix, Twitch... What we will have tomorrow with computers is a mystery. I hope I participate a little in that evolution.
